

## 5 Minute Informative Speech Examples

During the Second World War Einstein had a part in the creation of the nuclear bomb in what was called the Manhattan Project. This bomb was easily the most destructive thing on the planet at that time and is still considered extremely dangerous in today's world. Many scientists grow to fear what they have developed, and Einstein is no exception, he is a great example of a scientist who became aware of how dangerous his work had become. With the invention of the nuclear bomb, there was a large fear growing within the group that knew about the project on how that bomb would be used among the scientists who created it. In the speech "The menace of mass destruction" Einstein addresses the worries he had as well as trying to influence others to agree with him. Knowing the true potential that nuclear bombs possessed he presented this speech as an effort to stop the bombs from ever being used. He presented his ideas by using logos, ethos, and pathos to enhance his points in the speech.
